

Included Global Catalogs

Unit 5.5.3

Included Global Catalogs

Rancher includes three default catalogs at the Global level, although only one is active by default.

The Library is a curated list of apps for which Rancher provides catalog entries. The apps themselves are not supported by Rancher, but the installation instructions, ported from the upstream Helm charts, are maintained by Rancher.

Rancher also includes the Helm Stable and Helm Incubator repositories. Global admins can activate these, after which their apps will be available at the cluster and project levels.
