Deploying Kubernetes With RKE

Unit 1.2.5

Deploying Kubernetes With RKE

Deploying an RKE cluster is as easy as running rke up with the config file that you generated with rke config.

When you do this, RKE will reach out to your systems over SSH and build them into a Kubernetes cluster.

Depending on how many nodes you're configuring, it can take anywhere from 3 to 15 minutes to build out the cluster. If the process is interrupted along the way, run rke up again to continue.
