# Catalog Scope

Unit 5.5.2

# Catalog Scope

Catalogs are scoped at the Global, Cluster, and Project levels. Project-scoped catalogs are the most specific, with their apps only visible to that Project. Cluster-scoped catalogs are visible to all Projects in that cluster, and Globally scoped catalogs are available to all clusters and all projects.

Scope is an important feature. Certain teams may run their own catalogs with their own applications that should not be visible to other users of the cluster. By scoping catalogs at the various levels, global operators can delegate responsibility for catalog management to cluster or project administrators, giving them the power and flexibility to do their work securely.
